Moeshawoods13@gmail.com | Birmingham, Alabama | (313) 778-2206

## EDUCATION

**Masters of Science, Computer Science** **Expected:2021**
University of Michigan-Flint, Flint, MI

**Bachelors of Science, Computer Science; Software Engineering Concentration** **2019**
University of Michigan-Flint, Flint, MI

## CERTIFICATIONS

**Pega Certified System Architect-platform version 8** **03/2020**

## COMPUTER SCIENCE/SOFTWARE ENGINEERING RELATED EXPERIENCE

**Research Assistant/Internship** **07/2018 – 08/2018**
Bergische University of Wuppertal (BUW) Wuppertal, Germany **04/2019 – 07/2019**

- Effectively executed both the backend and front development of the Department of Electrical, Information, and Media Engineering on continuous doctoral thesis projects.
- Developed prototypes user interfaces for an "online code editor teaching tool" utilizing Web Sockets, Tomcat, servers in Eclipse Java Development, Hypertext Markup Language (HTML), Java, JavaScript, and jQuery. Additionally, included features, such as syntax highlighting and code and line markers.
- Executed advanced Java programming, implemented the forms of inheritance for programs that allow parser syntax analysis to evaluate expressions at binary levels and the Institute of Electrical and Electronics Engineering (IEEE) 754 floating-point conversions.

**Research Assistant** **10/2015 – 09/2016**
University of Michigan-Flint, Flint, MI

- Led development team planning sessions to identify client's needs for website development. Utilized various development platforms, such as Cloud9 and Dreamweaver, to ensure user-friendly interfaces.

**Developer Intern** **07/2016 – 08/2016**
North America Bancard, Troy, Michigan

- Educated and knowledgeable in agile development environments, working with development teams on Sprint Planning.
- Effectively installed required software packages, while managing the Linux operating system-Ubuntu.
- Executed various tasks on the functionality in installing Github, software development, and version control.

## COMPUTER SCIENCE/ SOFTWARE ENGINEERING PROJECTS

**Predicting Parkinson's Disease (PD) with Metabolites, University of Michigan-Flint,** Flint, MI **2020**
Analyzed 200 plus metabolites using Knowledge Discovery in Databases (KDD) processes. Managed scientific data and designs in a team environment. Managed and wrote data codes by applying both industry and environment platforms, such as Python Language, Co-Lab, Scikit-learn, the data mining process, Numpy, and Pandas Libraries. Final reporting concluded explicit potential that two metabolites should be utilized and studied to make predictions regarding Parkinson's Disease early onset. Limitations in the research were identified. The sample size of 78 patients was inefficient in making definitive generalizations. To determine definitively if these metabolites are instrumental in supporting doctors in diagnosing patients with PD. Further research is needed utilizing larger sample sizes.

**Human-Computer Interaction Course: My diet Tracker, University of Michigan-Flint,** Flint, MI **2019**
Executed in a team setting, developed a research-driven, user-friendly mobile application for dietary health tracking. Utilized the Center Design process, Android Studio, and Java Computer Software to create low/medium/high-fidelity prototypes. Designated responsibilities consisted of managing script programming, developing application functions, and managing the User-Centered Design Processes. Additionally, conducted qualitative research on the user experience and led the data coding, evaluation, and final analysis for reporting.

## COMPUTER SCIENCE/ SOFTWARE ENGINEERING PROJECTS CONTINUES

Lastly, prototypes were tested using usability testing.

**NERF SENTRY TURRET, Capstone, University of Michigan-Flint,** Flint, MI **2019**
Performed as a team, Nerf Sentry Turret was used to develop an innovative, versatile toy that could be utilized by children and adults. The goal was to create an engaging activity that exposes the users to concepts of being an assembler. Using the Nerf Sentry Turret, modifications to the Nerf gun were made to connect motors and a Raspberry Pi to shoot in manual and automated modes. This was accomplished through the use of the agile methodology. Additionally, developed Unified Modeling Language (UML) diagrams, OpenCV, Python 2.7, and conducted testing. OpenCV was used to support the development of detecting motion and locating targets. Ending outcomes, a successful innovative, versatile prototype toy was designed and presented for children and adults.

**Project-Go, Project Management, University of Michigan-Flint**, Flint, MI **2018**
Executed in a team environment, created a proposed project management plan for a campus interactive mobile app. The final product was a mobile real-time app that could provide mapping, rating systems, and displayed campus events for prospective and current students, staff, and other campus visitors.
Managed the designing of the project timeline, hardware, and software for the proposed application on a set designed budget. Developed UML diagrams, budgets, and conducted intense research on software and hardware using software engineering principles to create user interface designs for mobile apps.

## INTERNATIONAL EXPERIENCE

**Independent Research** **07/2017 – 08/2017**
Rethinking Social Development, South Africa, East Cape Town, South Africa

- Educated students on social development through various educational methods, such as assigned readings, site visits, active discussions, and seminars. Executing the administering of these educational opportunities demonstrating cultural competency.
- Promoted community-based learning through the Ubuntu Arts framework, motivating students to employ skills in creative collaborations, problem-solving, and the designing and displaying of art.

## PROFESSIONAL DEVELOPMENT

**InternMe in 3, University of Michigan-Flint** **2018**
**Professional brand building**: displayed professional skills, talents, and field commitment to premier employers for internship opportunities in a three-minute presentation. Professional opportunity for 25 students selected within the institution.

**Corporate Case Competition, University of Michigan-Flint** **2019**
Solved global corporation matters using the Design Thinking model approach of interdisciplinary groups. Under the corporate partner representative's mentorship, conducted quantitative research, and presented viable solutions to a 200 plus audience based on group collaboration and research findings.

## LEADERSHIP SKILLS

**Inducted Member; Computer Science Honor Society, Upsilon: Pi Epsilon** **2019**
**Treasure; University of Michigan African Student Association** **2019**
**Senator; National Society of Blacks in Engineering** **2019**
**Community Service Coordinator; University of Michigan Block Club** **2019**
**Treasure; Association for Computing Machinery** **2018**
**Inducted Member; National Society of Leadership & Success** **2018**
